*CTO and principal engineer — 8086 to Defi: fintech, regulated exchanges, and multi-agent systems.
Technology leadership across regulated finance (ADGM, MAS, FCA, BaFin), startups & blockchain.
Architecture, delivery, and teams — 20+ years building systems and teams.*

TECHNICAL SKILLS

AI & Agentic	Agentic engineering (Shapiro Level 5, Yegge Stage 8): harness, context and verification engineering; multi-vendor fleets (Claude Code, Codex CLI, Kimi Code, Grok Build); token run rate circa 60B a month, 2.2B per active day
Languages	TypeScript/JavaScript, C# (.NET/CLR), C/C++, Go, Rust (std-only; Anchor), Solidity (EVM), T-SQL, Python
Frontend	React, Next.js, Vite, Tailwind, Electron, Playwright, iOS (Obj-C/Swift), Android
Backend	Node.js, Go microservices, REST/WebSocket APIs, FIX (quickfixgo), NATS JetStream, Temporal, TIBCO/JMS
Data	SQL Server/T-SQL (20+ yrs), PostgreSQL 18 (CloudNativePG), Redis/Valkey, Azure Table Storage, Hadoop
Cloud	Azure (App Services, Functions), AWS (ECS Fargate, Cognito, Lambda), Kubernetes, Argo CD, GitHub Actions
Blockchain	Solidity/EVM (7+ yrs), Rust/Anchor/Solana, Web3.js, Ethers.js, Geth, ERC-20/1400/1404, Chainlink

EXPERIENCE

Heimdall Global | Fractional Chief Technology Officer

Aug 2026 – Present

- Solo engineer and CTO for an FSRA-regulated (ADGM) prediction exchange: a central-limit-order-book venue for fully collateralised \$0–\$1 yes/no event contracts (Yes + No = \$1) on curated markets — economic data, policy decisions, crypto, weather, politics. Compliance-first under MIR, COBS, FSMR and AML: client money as trust property, daily reconciliation, surveillance, KYC/KYB, and event resolution with bonded challenge, committee adjudication and appeal
- Solo dark-factory agentic orchestration — Shapiro Level 5 (no human reads, writes or approves the code; verification moved up the stack) with Yegge Stage 8 (agents orchestrating agents: frozen spec to verified, merged code automated across 5 harnesses, 4 providers, 3 capability tiers) — by spec-driven delegation from a 977-requirement PRD in 14 families, every requirement carrying executable acceptance criteria and a regulatory hook (168 rulebook citations). Monthly run rate: 440k lines of code and configuration (125k product, 157k test), +1.33M / –200k lines churned, 3,700 commits, 870 merged PRs, 4,900 CI runs, 44B tokens (1.48B a day mean, 4.97B peak)
- Fully open-source, relicensing-aware stack: Rust std-only deterministic matching engine (zero third-party crates) · Go 1.25, 21 services (ledger, funding, onboarding, screening, resolution, market lifecycle, audit) · PostgreSQL 18 · NATS JetStream · Temporal · Keycloak + OpenFGA + OPA · quickfixgo FIX 5.0 SP2 · Kubernetes with Argo CD GitOps · OpenTelemetry/Grafana · cosign, Syft, Trivy supply chain · React 18

AirCarbon Exchange (ACX) | Chief Technology Officer

2019 – 2026

- Architected the world's first fully digital, regulated carbon exchange (ADGM, MAS): wrote the CLOB spot engine and RFQ/auction markets; built a lean engineering team across UAE, UK, US, Canada and Singapore; IDX selected the stack over Nasdaq; EON and B3 white-labelled it; Deutsche Börse cited the stack as the key Series A investment driver
- Designed the hybrid split-ledger architecture decoupling high-frequency matching from on-chain settlement (CertiK-audited Solidity): multi-asset ERC-20/721, multi-collateral, ERC-1404 transfer restrictions, atomic spot trading, futures position management and liquidation; migrated DLT from BSC to Polygon; integrated Aave/USDC lending
- AWS ECS Fargate with Cognito, REST/WebSocket LP APIs, KYC/CMS/order-entry vendor integrations, k8s and cloud-agnostic deployments, ADGM and MAS TRM compliance; interim CTO for SDAX (MAS): ERC-1400 tokenised equities with Chainlink oracles, in-principle approval secured

ayondo | Head of Innovation

2016 – 2019

- Led Singapore R&D (15-person engineering, design and digital marketing); re-architected the C# simulation-to-execution bridge from TradeHero's engine to live FIX/OMS for real-money execution under FCA/BaFin; on-chain wallets, identity and token-gated accounts
- Built KYC/AML (C# + native mobile) and payment microservices; led technical due diligence and wrote the innovation roadmap for ayondo's SGX RTO/IPO

TradeHero | Founder & Chief Technology Officer

2012 – 2016

- Founded, built and scaled TradeHero: C# WebAPI, SQL Server, Azure Table Storage, Redis, HDInsight/Hadoop; iOS and Android apps on 28 global exchanges; 6m+ users and 100k DAU across 95+ countries; \$10m Series A led by Kleiner Perkins
- Zero-downtime live migration of 300m+ rows SQL to NoSQL; 40/20/10% cohort retention at 1/7/30 days; grew engineering from 0 to 35+ across Singapore and Shanghai; owned product for the first two years; acquired by ayondo in 2016

EARLIER CAREER · EDUCATION & INTERESTS

Standard Chartered Bank — eCommerce Head of Quality & Release (2012) · Citi — Global Release Manager, Equities Risk (2008–11) · Microsoft Consulting Services — SDET (2005–08) · RBS, Deutsche Bank, Barclays — front-office developer, derivatives (2004–05)
Conditional offer — King's College, Cambridge (Natural Sciences / Philosophy) · A Levels A, B, C · GCSEs 7 As · Fitness, Judo, chess
